### Curve Craft KBB Exhibition Preview

#### Stand L105

**C**urve Craft, the manufacturer and supplier to the trade of curved doors and accessories will be showcasing a heavily extended product range on their stand at KBB Birmingham.

Paul Murray, Managing Director comments "We are well known at the high end of the market for our expertise in manufacturing in-frame curved doors in any timber or finish. However, it's important for us to promote to customers, old and new, that we can produce matching accessories such as curved corning as well as doors for other design genera's.

For KBB 2014 we will be showcasing our new curved Slab Door range. Our lay on, slab doors have integrated handles and are available in plain MDF or veneered in any timber finish to include oak, walnut, birch, maple or even burrs. Curved matching cabinetry, cornice, plinths and lighting pelmets are just some of the many accessories that are also available."

During the last 12 months, Curve Craft have gone from strength to strength, building on their customer portfolio of prestigious furniture manufacturing clients. Recently, they introduced the option of curved, glazed in-frame doors.

"We are excited about KBB Birmingham since we have a lot to offer, by way of product range and our current client portfolio speaks volumes about our service and levels of quality.

### The Zip tap that can boil, chill, sparkle and mix all-in-one

**Z**ip has added the Sparkling All-in-One to its popular residential HydroTap range. Able to deliver filtered boiling, filtered chilled still and sparkling and hot and cold water, it is ideal for homeowners who want a multi-tasking appliance.

This tap can be fitted in place of a mixer and at a two-bowl sink. Options are available to connect to the mains pressure hot and cold supply or eliminate the need for connection to a separate hot water heater or supply; a vented model mixes cold

water with boiling to deliver hot water. For customers with a single-hole sink the tap can be retrofitted if the hole measures or can be enlarged to 50mm.

Power-Pulse technology reduces the energy needed to heat the water by giving a boost to stored water at intervals, requiring little time to get back up to temperature; avoiding a continuous heat cycle or having to heat water from cold. This latest model includes a light sensor that sends the system into sleep mode whenever the room darkens.

For safety the taps remain cool to the touch during and after use. Fingertip control gives greater accuracy, it fills without splashing and you can select the temperature at which the water is stored.

Automatic safety locks require a set number of touches to turn off so the catch cannot accidentally be removed.
